

# CUSTOM DESIGN

## CHARGING LOCKER

## THE PRODUCT

This Charging Locker was engineered to bring power to the people. Whether it be an outdoor concert, a construction site, a university or any community area, access to power is not only a convenience but often times a necessity.

With this Charging Locker, people can plug in their mobile devices at a concert, power tools at a construction site, laptops on campus, or any other power need they have.

The individual lockers are equipped with GFCI outlets and USB ports for charging various devices, tools, or other electronics. The Charging Locker is also equipped with four retractable extension cords that extend 50 feet. There is one extension cord on each side of the unit so that power can be delivered any direction.
