

BIOGRAPHY

AARON R. PADRNOS

Aaron Padrnos joined Trystar on June 2, 2014, and serves as Senior Manager – Customer Experience. He is based in Burnsville, Minnesota.

Padrnos started his career with Trystar as a Corporate Sales Consultant. He was promoted to Sales Manager in 2016, where he specialized in developing and closing sales opportunities and building customer relationships. In 2020, he transitioned to the manufacturing space, where he served as Lean Lead on projects designed to help reduce cycle time and errors in processes across the organization. In addition to the responsibilities of his Lean management position, Padrnos was instrumental in the project management of the design, planning, and installation of Trystar’s microgrid at the Faribault manufacturing facility. In addition to the practical and sustainability aspects of the microgrid, Padrnos is also responsible for capturing and recording operational data on the system to inform future renewable energy solutions.

Padrnos advanced to Trystar’s Senior Manager of Customer Experience in 2022. He focuses on managing the customer experience from initial contact to order receipt through the subsequent product lifecycle.

Padrnos holds a bachelor’s degree in mathematics from St. John’s University in Collegeville, Minnesota.

About Trystar

Trystar designs and manufactures a wide range of portable and industrial power products, including portable renewable hybrid energy systems, panels, I-Lines, transformers, portable automatic transfer switches (ATS), and welding racks. It also manufactures generator docking stations, load banks, and UL-891-rated switchboards. Trystar cable products include portable and industrial power, welding, utility, and medium voltage cables. Trystar offers emergency lighting inverters, power conditioning and voltage regulation equipment, industrial DC power supplies (rectifiers), uninterruptible power solutions, sequence-of-events recorders (SER), and GPS time reference and synchronization devices. The manufacture of prefabricated conventional and blast-proof remote instrument enclosures (REIs) and E-Houses complements its diverse solutions portfolio.
